SHARAD DUBEY

Senior Full Stack Developer | React.js | Node.js | Express.js | MongoDB | AWS | LLM Security | HIPAA

India • +91-8922096699 • ersharaddubey@gmail.com

PROFESSIONAL SUMMARY

Senior Full Stack Developer with 10+ years of software development experience across frontend, backend and enterprise web applications. Hands-on experience with React.js, Node.js, Express.js, MongoDB, REST APIs, AWS, real-time systems, AI/LLM application workflows and HIPAA-compliant healthcare systems. Strong focus on personally owned architecture, implementation, API development, database design, debugging, optimization and secure application design (including PHI protection and audit logging).

CORE TECHNICAL SKILLS

- Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Tailwind CSS
- Backend: Node.js, Express.js, REST APIs, WebSocket, API integration
- Database: MongoDB, MySQL, PostgreSQL, data modelling and database-driven applications
- Architecture: System Design, Modular Architecture, Microservices, REST Architecture, Real-Time Architecture, HIPAA-compliant design
- AI / LLM: Prompt Engineering, Image-to-Prompt workflows, LLM application security, OCR-based text extraction, prompt validation and iterative rendering
- Security: PIN-protected workflows, JWT authentication, role-based access control, input validation, data protection, HIPAA/PHI safeguards, audit logging
- Cloud: AWS EC2, AWS S3, MERN deployment, production optimization
- Engineering: Debugging, Pattern Detection, Performance Optimization, Technical Decision-Making

SELECTED PROJECTS — MERN STACK WITH ARCHITECTURE OWNERSHIP

1. PROMPT FACTORY | AI Prompt & LLM Security Platform

Technology: React.js, Node.js, Express.js, MongoDB, REST APIs, AI/LLM services, OCR, AWS | Status: Currently architecting and developing

- Architecting a full-stack platform that converts an input image into a structured generation prompt and maintains a secure, repeatable prompt workflow.
- Designed the flow across React.js frontend, Node.js/Express.js backend, REST APIs, MongoDB and AI/LLM processing services.
- Personally implementing image-to-prompt extraction and structured prompt generation for future image regeneration.
- Designing prompt protection so protected prompt data cannot be directly reused by unauthorized external platforms.
- Implemented a PIN-protected prompt access flow for sensitive prompt information with incorrect-PIN response that generates a deliberately different visual representation.
- Working on prompt-to-image accuracy improvements through multi-pass rendering, repeated refinement and pattern-mismatch tracking in MongoDB.
- Using OCR to extract text embedded in source images and store it as structured data for downstream copyright/documentation workflows.

Architecture Ownership:

Input Layer image upload analysis OCR/text extraction | AI Processing visual analysis structured prompt generation iterative refinement regeneration | Security Layer access control PIN verification protected prompt handling unauthorized-access response | Backend Node.js/Express REST APIs validation pattern detection tracking | Data Layer MongoDB (prompts, OCR data, mismatch history, accuracy tracking) | Learning Layer recurring pattern analysis prompt-processing improvement | Deployment AWS production architecture

2. MEDSECURE | HIPAA-Compliant Healthcare Management System

Technology: React.js, Node.js, Express.js, MongoDB, REST APIs, JWT, Role-Based Access, AWS | MERN Stack | HIPAA Architecture

- Architected and developed a full-stack HIPAA-compliant healthcare management platform for patient records, appointments, prescriptions and clinical workflows.
- Designed end-to-end PHI (Protected Health Information) protection including encryption at rest and in transit, access control and comprehensive audit logging.
- Implemented role-based access control (RBAC) for Doctors, Nurses, Admin, Receptionist and Patient roles with least-privilege principles.

- Built secure patient portal with appointment booking, medical history viewing, prescription download and secure messaging.
- Designed consent management and data-sharing workflows that enforce patient authorization before any PHI is accessed or shared.
- Implemented full audit trail for every PHI access, modification and export action to support HIPAA accountability requirements.
- Created modular backend modules for Patient, Appointment, EMR, Billing and Notification services with clean separation of concerns.
- Personally owned technical decisions for security boundaries, encryption strategy, session management and HIPAA technical safeguards.

HIPAA Architecture Ownership:

Presentation React.js patient & provider portals with role-aware UI | Auth Layer JWT + RBAC + session hardening | Business Logic Node.js/Express micro-modules (Patient, EMR, Appointment, Billing) | Security & Compliance PHI encryption, access logging, consent checks, minimum necessary principle | Data Layer MongoDB with encrypted fields + audit collections | Integration secure external lab/pharmacy APIs (no PHI leakage) | Infrastructure AWS with encrypted storage, private networking and monitoring

3. CLINICFLOW | Multi-Clinic Healthcare Operations Platform

Technology: React.js, Node.js, Express.js, MongoDB, REST APIs, Socket.IO, AWS | MERN Stack

- Designed and built a multi-clinic healthcare operations platform covering appointment scheduling, doctor roster, medical supplies inventory and billing.
- Architected real-time queue and waiting-list management using Socket.IO for live updates across reception desks and doctor screens.
- Implemented centralized admin dashboard with multi-branch support, role-based access and configurable clinic settings.
- Built inventory module for medicines and consumables with low-stock alerts, batch/expiry tracking and purchase order workflows.
- Designed billing and invoice generation module with tax, discounts, insurance claim placeholders and payment status tracking.
- Created analytics dashboards for patient footfall, revenue trends, doctor utilization and inventory turnover.
- Personally responsible for system design, database schema, API contracts, real-time architecture and production deployment on AWS.

Architecture Ownership:

Frontend React.js multi-role dashboards (Admin, Reception, Doctor, Inventory) | Real-Time Socket.IO for live queue & status updates | API Layer Express.js REST services with modular controllers | Domain Modules Appointment, Roster, Inventory, Billing, Analytics | Data Layer MongoDB (patients, visits, stock, invoices, configs) | Deployment AWS EC2 + S3 with environment-based configuration

PROFESSIONAL EXPERIENCE

Senior Software Developer | Avisha Global Technologies Consultancy Services | Allahabad
Dec 2025 – Present

- Designed and developed a real-time chat system using React.js, Node.js and Socket.IO.
- Built REST APIs and WebSocket services for real-time communication.
- Implemented JWT authentication and role-based access control.
- Deployed MERN applications on AWS EC2 and optimized production performance.
- Worked hands-on on architecture, API integration, debugging and optimization.

Senior Web Developer | Aabhyasa Technologies Pvt. Ltd. | Varanasi
Nov 2021 – Nov 2025

- Managed and mentored a cross-functional team of 10 developers and established coding standards.
- Architected healthcare webinar platforms and enterprise SaaS products with secure user/data-access workflows.
- Led end-to-end product design and AWS deployment activities.
- Designed automation workflows and optimized service components, reducing document processing time by 50%.

Software Developer | Pride Solution | Prayagraj
Jun 2020 – Oct 2021

- Led a team of 5 developers to architect and deliver production applications.
- Designed ERP frontend architecture, state-driven modules, inventory trackers and role-based dashboards.
- Engineered data visualization systems for government COVID-19 tracking applications.
- Improved interaction speed by approximately 40% through frontend and state-management optimization.

Software Developer | Edunext Technologies Pvt. Ltd. | Noida
Jun 2019 – Jun 2020

- Designed responsive interfaces using HTML5, CSS3, JavaScript and Bootstrap.
- Integrated dynamic backend components with frontend applications.

- Optimized website assets for improved loading performance.

Software Developer | Vapsoft Technologies Pvt. Ltd. | Prayagraj
Oct 2015 – May 2019

- Developed dynamic web applications using PHP and MySQL.
- Integrated payment gateway, SMS and email APIs.
- Implemented XSS, CSRF and SQL injection prevention practices.

EDUCATION

B.Tech – Kashi Institute of Technology, Varanasi | 2015
